

DIAflor Sedummat Tile

500109

Pre-vegetated sedum tile with at least 95% coverage right at delivery out of 6+ different spp.

KEY FEATURES

- Easy to handle by skilled and unskilled installers
- Quick establishment rate
- Reduces weed intrusion
- Can reduce delivery costs
- Provides instant vegetation

APPLICATION

Although pre-vegetated products have typically a bigger carbon footprint, than using Sedum cuttings, they are still useful in certain market segments such as clients in need of instant green. Diadem sedum tiles are pre-cut to 12" x 24" rectangles, which can easily be delivered and installed, even to hard-to-access roofs.

SPECIFICATION

Diadems pre-vegetated mat, is a sod-like pre-germinated 12"x24" sedum tiles that achieve immediate full plant coverage. These pads are lightweight and easy to install, nevertheless have 95 percent coverage or better right at the delivery. These mats are typically planted with sedum spp., but upon request Diadem can customize the plant selection. Pre-vegetated mats establish themselves in 4-6 weeks on a green roof and provide immediate erosion control and minimize weed intrusion. After the establishment period, the mats require minimal maintenance with little watering and weeding.

TECHNICAL DATA

Sedum ellacombianum: (Zone)	4-7
Sedum kamtschaticum'Variegatum': (Zone)	4-7
Sedum spurium Roseum: (Zone)	4-7
Sedum reflexum'Blue Spruce': (Zone)	5-7
