

DiaNET-65

High-strength, geogrid net for wind uplift protection.
#3205030

Manual

■ Green up the roof!

Application:

DiaNET-65 geogrid is mainly utilized wind uplift protection layer, but it could be used as soil reinforcement in MSE structures such as; segmental retaining walls, □ precast modular block walls, wire faced walls, geosynthetic wrapped faced walls and steepened slopes.

Installation instructions:

Prepare the media by grading or raking the area free of clods. Remove debris and check that the surface is clean and sound. Do not compact. Distribute the vegetation evenly, and water it well. Unroll the erosion mats, following the direction of the waterflow. Leave a 12" overlap at the ends and 4" at least at the sides. Do not stretch, and never make cuts directly on the waterproof membrane. Secure the blankets using bio-stakes, following the specified spacings.

Installation Tools:

For safety reasons and protection of the roofing membrane, use scissors for cutting the blankets. Never use a sharp blade cutter, or knife.
