

DIAnthus-150 Perennial Seed Mixture

DIAnthus is a carefully chosen assortment of perennial seeds.
#500119

Manual

■ Green up the roof!

Application:

This mix is typically applied to extensive green roofs and has a high percentage of herbaceous plant species. Beyond durability, these plants add a diverse range of colors, forms, and textures to green roof mainly based on Sedum species. Meadowfoam is the primary component of this mix, adding fireworks to the wildflower display in the spring and fall. With over 80% of the mix consisting of wildflowers and forbs, this mix does extremely well in poor, shallow green roof soils. Very drought tolerant and little need for synthetic fertilizer makes this mix is an excellent re-seeder.

Installation instructions:

Best time for sowing is early to mid spring. Sedums are very tiny seeds which should be mixed with the finest sand or talcum for an even sowing. Do not use more than 1/4-1.0 lbs / 1,000 sqf. Do not cover seeds after sowing, but roll the surface. Irrigate the growing media before planting and keep it wet during the germination, but not so wet that the seeds will be washed away.
