

FK-10

FK-10 slab spacers for the perfect drainage of paved areas.
#610103

Manual

■ Green up the roof!

Application:

Paving slabs for terraces on building structures must be loose laid with permanent spacing between the slabs. Providing a permanent space between slabs enhances drainage properties even on sandbed or substrate. Ensuring equal spacing between the slabs and increasing the aesthetic value of the overall paving layout by forming a distinctively clear and even pattern.

Installation instructions:

The cross spacers should be installed after the bedding is ready as the paving progresses with the wedge shape uppermost. The quantity of spacers needed will depend upon the layout pattern of the paving and the size of the slabs.
