

DiaDomino-DP

Sloped roof system

160612

KEY FEATURES

- Recycled Composite, durable structure.
- Easy to install.
- Curved roofs can also be covered.
- Sedum mat compatible.
- Slots for Irrigation pipes

APPLICATION

The DiaDomino-DP system is mainly used to install extensive green roofs on a 20 to 50-degree (4:12 to 14:12) slope. Due to its modular design it is great for flat, dome, curved and pitched roofs as well. The vegetation can be placed directly in the cells filled with growing media, or by using precultivated mats on the top of the media. The cells are prepared to receive irrigation conduits; pipes drip into receiving grooves, so the system can be hidden in the cell layer.

SPECIFICATION

TECHNICAL DATA

Material need: (piece / sqf)	0.386
Height: (inch)	3 1/8
Width: (inch)	15 11/16
Length: (inch)	23 9/16
Weight: (lbs)	2.05
Material:	Rec.-Polypropylene
Color:	black
