

DIAAlbum Sedum Cuttings

500103

Cuttings are a mix of at least 6 different sedum species, harvested from adult plants.

KEY FEATURES

- Provides plant diversity
- The most economical way to establish vegetation
- Quick and easy method is planting green roofs
- Sedums are hardy and can quickly be established
- Cuttings can be used alone or in combination with seeds and plugs

APPLICATION

Sedum cuttings are the most economical method for planting vegetation on a green roof. DIAAlbum is a mix of six or more sedum species. Green roofs tend toward extreme conditions, each species has been selected to tolerate different rooftop microclimates. Sedum cuttings are typically used on large extensive type green roofs, and can be used alone or in combination with plugs and/or seeds.

SPECIFICATION

Bulk Sedum cuttings offer the green roof installer the most ecological and economical method of planting. However the bulk Sedum cuttings planting method presents limited opportunities for creative design in the installation process, they are inexpensive to buy, makes the highest diversity possible, easy to convey onto the roof, and quick to plant. The biggest advantage is the wide range of possible mixes to create, even in different planting rates measured by pounds-per-thousand square feet, and range from a very low rate of 25 lbs./1,000 sf, up to a high of 250 lbs./1,000 sf.

TECHNICAL DATA

Sedum spurium 'Fuldaglut' (Fuldaglut Stonecrop)	Flattened, bronzy-red leaves, to 1 inch long, and star-shaped, rosy-red flowers, to 3/4 inch wide
Sedum reflexum 'Blue Spruce': (ue Spruce Stonecrop)	A drought tolerant groundcover with small, succulent blue leaves reminiscent of the needle of a spruce
Sedum floriferum 'Weihenstephaner Gold' (Baileys Gold)	One of the groundcover sedums, this one is covered in canary yellow star-shaped flowers in late spring
Sedum album 'Murale': (White Stonecrop)	Green foliage is bright green in summer and turns reddish-orange in winter. Flat clusters of small starry white flowers
Sedum album 'Coral Carpet': (Coral Carpet Stonecrop)	Small succulent leaves are coral when new, maturing to green and becoming reddish-bronze in winter. Small, star-shaped flowers
Sedum acre 'Gold Moss': (Goldmoss Stonecrop)	This plant is attractive to bees, butterflies and/or birds, tiny yellow flowers lend it the appearance of moss
Sedum sexangulare: (Watch Chain Stonecrop)	Quick-spreading groundcover with spongy foliage that turns shades of rose in the summer
Sedum acre 'Aurea': (Wall Pepper Stonecrop)	Tiny pale green spreading stonecrop which blooms May & June, peppery plant
