

RDA-40 Recyclen

RDA type products are supporting elements suitable for the edging of superstructures with various layer-thickness in connection with roofs of mostly limited load-carrying capacities.

#160302

Manual

■ Green up the roof!

Application:

RDA edge pieces can be used, in the edging of terraces and green roofs. They are important distinctive pieces in the development of a garden layout. In addition these units can be used to house, trunking for electrical cabling. For decorative purposes lighting can be installed.

Installation instructions:

To secure the continuity of water drainage, a level and compacted base made up of mineral rubble is made on a heavy duty DIADRAIN layer on to which the RDA kerb is then placed. Preformed corner are available. This also allows continuous jointing of the pieces.

Installation Tools:

General garden-building tools
Screwdriver
