

JGW-500

100% biodegradable woven jute erosion blanket.
#320502

Manual

■ Green up the roof!

	<p>Application:</p> <p>JGW erosion blankets have multiple uses on green roofs, but their main functions are controlling erosion and reducing the wind damage on rooftops with high wind exposure.</p>
<p>Installation instructions:</p> <p>Prepare the media by grading or raking the area free of clods. Remove debris and check that the surface is clean and sound. Do not compact. Distribute the vegetation evenly, and water it well. Unroll the erosion mats, following the direction of the waterflow. Leave a 12" overlap at the ends and 4" at least at the sides. Do not stretch, and never make cuts directly on the waterproof membrane. Secure the blankets using bio-stakes, following the specified spacings.</p>	
<p>Installation Tools:</p> <p>For safety reasons and protection of the roofing membrane, use scissors for cutting the blankets. Never use a sharp blade cutter, or knife.</p>
