

DIADEM®-150

A multilayered, extensive vegetated roof system with 6" of growing medium
#810105

Manual

■ Green up the roof!

Application:

Extensive green roofs are an ecologically sound and economic system that can be installed on sloped roofs and on existing structures with limited load bearing capacity. Due to the thin system profile, traffic should be confined to maintenance paths or terraces. Maintenance requirements are low and irrigation is optional.

Installation instructions:

Please follow the component and accessories installation instructions. Also follow the safety gear instructions for the use of gloves, glasses, and helmet while installing the green roof system.
